

# ALPINOLS Pets CBD with salmon oil

## Safe to use with healthy ingredients

Our ALPINOLS CBD salmon oil has been specially formulated to meet the needs of your pets. CBD has a positive effect on pets and helps with pain, anxiety, loss of appetite, inflammation, cancer and epilepsy. Healthy pets also benefit from the effects of CBD: anxiety and aggression may reduce, eating behaviour may improve and the animal also benefits from a healthy digestion and shiny fur.

**Salmon oil:** In addition to the traditional range with our organic sunflower seed oil, we created an alternative for those pets struggling to eat, crafted with sustainable salmon oil. This CBD oil delivers essential Omega-3 and 6 fatty acids for health and wellness.

**THC free:** The endocannabinoid system and anatomy of a pet and a human are very different, meaning pets are more sensitive to the natural compounds of the cannabis plant and therefore, our products don't contain THC.

**Dosage:** The best dose of CBD for your pets will depend on body weight, symptoms, degree of discomfort, personal body chemistry and tolerance for CBD. Most pets owners have found an effective dose of 0.3mg CBD for each pound of body weight.

Our 3% oil contains 1.5 mg CBD per drop

Our 6% oil contains 3 mg CBD per drop

The above are general dosage guidelines. If you find that this initial dose is not effective, you can increase this little by little. Your veterinarian can give you specific dosage recommendations.

**The oil for cats is terpene-free:** Terpenes are natural molecules that we perceive as aroma substances. Hemp extract is also rich in terpenes, which have many positive and health-promoting properties for humans but not for cats. Terpenes in cats can only degrade very slowly and may cause discomfort, liver and kidney issues.

This is why we recommend products which come from safe production, with the appropriate quality and certification for long-term treatments. Furthermore, each of our products is tested by an independent laboratory.
