Swiss Organic Partners At a Glance

We are one of the leading pharmaceutical and consumer cannabis product companies in Europe. Based in Switzerland, we develop, manufacture and distribute high-quality cannabinoid products for the pharmaceutical and well-being markets. We strive to improve lives by harnessing nature's secret ingredients and making the highest quality, Swiss- grown, organic cannabinoid products available to everyone. We see ourselves as a partner for all companies with the highest quality and service requirements.

Swiss Made
to the highest
quality standards

The largest Bio Suisse-
and GACP-certified farm
with over 37 acres

Everything from a single
source, from the field
to the shelf

The Love of Nature Is What Drives Us

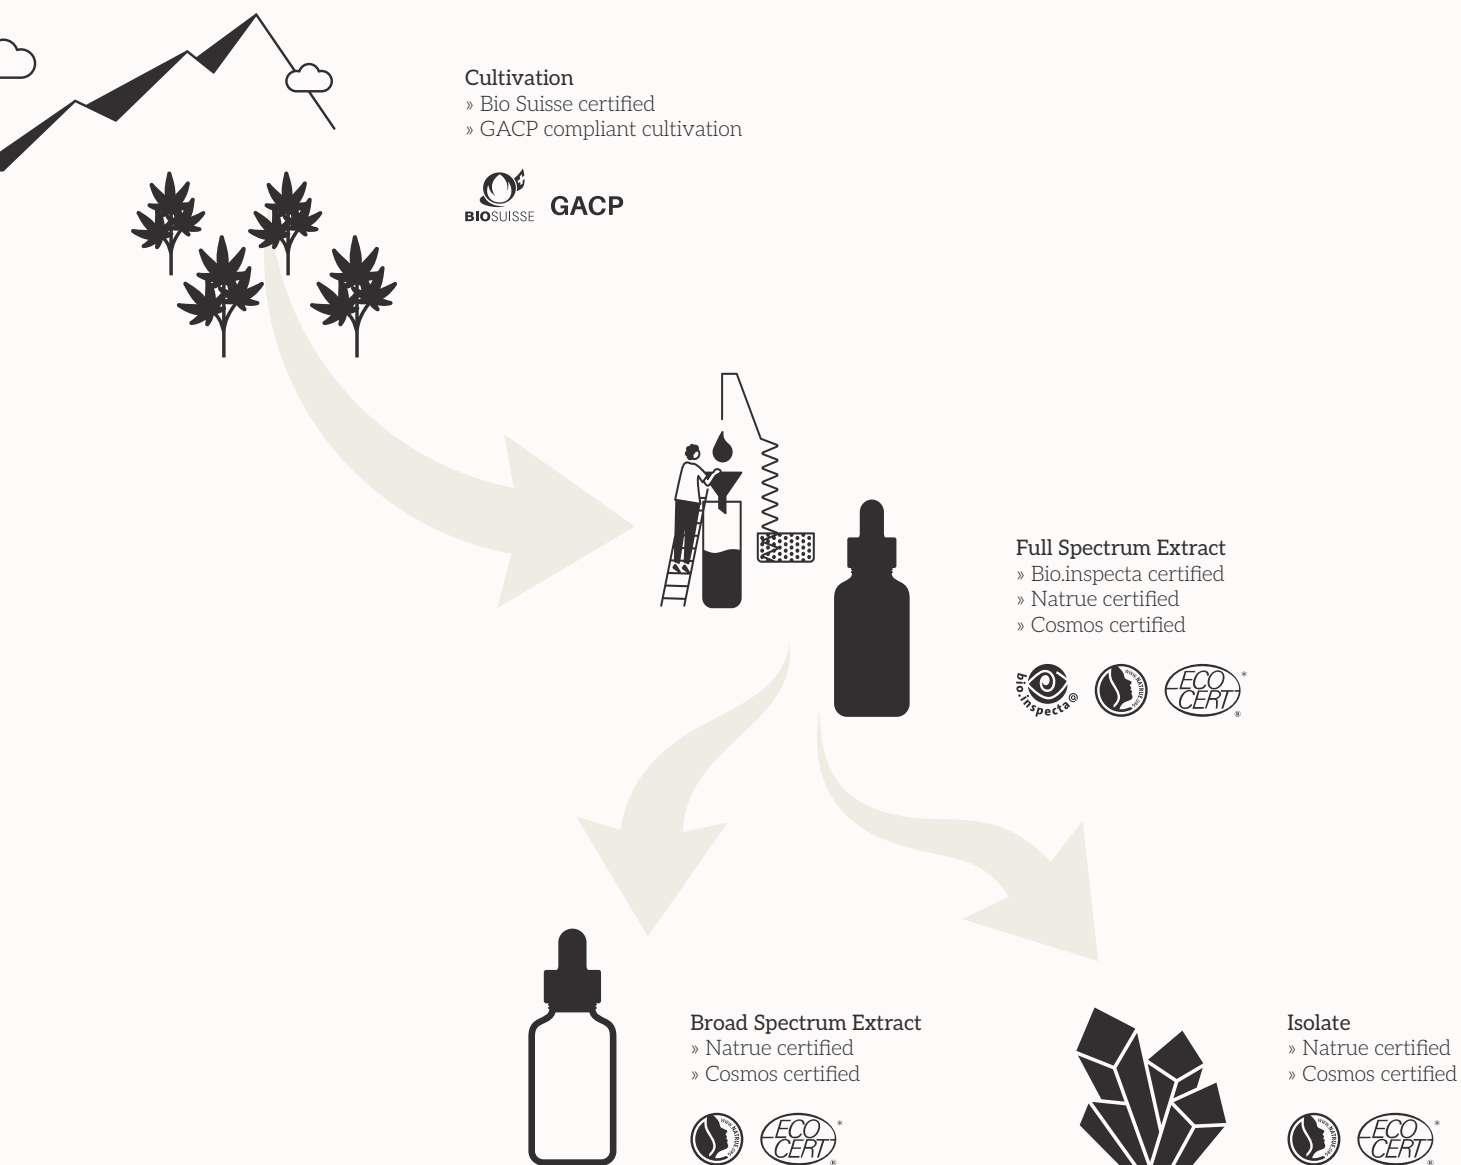

Having grown up in the alpine landscapes, we strive to improve lives with nature's secret ingredients. Our farming and production of this power plant is unique. With our careful farming and production of cannabis, we ensure the highest quality of our organic CBD products. Having over 15 years of cannabis cultivation experience and over 25 years in organic farming, we've learned that plants are very similar to people. The more love and care they get, the better they grow. That's why we harvest every leaf by hand, don't use any foreign substances, and analyze our products in-house and with an independent laboratory—to guarantee consistency, transparency and the highest quality.

BRANCHENVERBAND
CANNABISWIRTSCHAFT E.V.

The Best Quality Our Guarantee

Bio Suisse organises and manages the development of the Bud and organic farming in Switzerland. The Bud, the brand of Swiss organic producers and their organic products, guarantees compliance with the strict Bio Suisse standards and thus a very high organic production standard across the entire farm. The Bud has become the organic brand in Switzerland with the greatest credibility and the highest level of recognition.

- » Use of only natural means
- » Production of gently processed products
- » Assuming social responsibility for employees
- » Caring for the soil so that it remains fertile and alive
- » Responsibility towards nature

bio.inspecta is the leading Swiss provider of inspection and certification services for products that are produced in an ecologically sustainable, animal-friendly and socially responsible manner.

- » At least 95% of the ingredients must be of organic quality
- » Products that are certified according to the basic requirements of bio.inspecta may be advertised as organic

GACP

Our organic farmers are audited for compliance with the European Medicines Agency (EMA) Good Agricultural and Collection Practice (GACP) guideline for the cultivation of cannabis. GACP compliance ensures the highest and consistent quality of herbal products, while taking into account environmentally relevant aspects of agricultural production.

NATRUE is a European certification organisation. The organisation provides a set of standards for the certification of natural and organic cosmetics, which include requirements for the production, processing, manufacturing, labelling and marketing of natural and organic cosmetic products. The strict NATRUE criteria guarantee that manufacturers who have their products certified with the NATRUE label formulate according to one of the highest standards for natural and organic cosmetics on an international level.

- » No synthetic preservatives, fragrances or dyes and the use of environmentally friendly production methods.
- » Reliable, verifiable and international standard
- » Ensuring clarity of natural and organic ingredients and product transparency

Ecocert is the world's leading specialist in certification of sustainable practices. Ecocert is a French certification body that sets standards for natural and organic cosmetics. The standards require that all ingredients used in the manufacture of a cosmetic product are of natural origin and come from renewable resources. Ecocert also sets requirements for the manufacturing process, packaging and labelling of cosmetic products.

- » COSMOS CERTIFIED signature is for physically and chemically processed ingredients with biological content that comply with the COSMOS standard
- » COSMOS APPROVED signature is for non-biological raw materials for use in cosmetic products that are certified and approved according to the COSMOS standard

Raw Materials High-Quality Organic Hemp Extracts

We offer a wide range of premium Swiss Made organic hemp extracts and cannabinoids for various industries. Thanks to our many years of experience in the supply and development of various high-quality cannabinoid products, we have customized solutions for different industries, such as the cosmetics or food industry.

Full Spectrum oils

We offer different types of Full Spectrum extracts with the Full Spectrum of all naturally occurring cannabinoids and terpenes.

Broad Spectrum oils

Thanks to THC extraction using flash chromatography, we offer high-quality Broad Spectrum extracts and distillates.

Isolates

We offer a wide variety of cannabinoid isolates (CBD, CBG, CBN, etc.) of the highest purity, free of impurities, and in different variations.

Certifications

We offer various certifications and labels, such as Natrue certification or Bio.Inspecta certified products and raw materials.

No animal testing

CBD Isolates

DESCRIPTION	%	SWISS MADE	CULTIVATION	LABEL	ITEM NO
CBD isolate from Swiss organic hemp cultivation This CBD isolate fulfils the highest standards in terms of quality and purity. It has also been awarded the “Natruue” and “COSMOS approved” certifications, making it ideal for use in cosmetic products that are certified in accordance with NATRUE or COSMOS guidelines. The CBD is carefully produced from organically certified Swiss biomass in Switzerland.	> 99%*	+	Bio Suisse		A000560
CBD isolate from conventional hemp cultivation EU This CBD isolate is obtained from conventionally grown biomass in the EU. It is also “COSMOS approved” and therefore ideal for use in cosmetic products that are certified according to COSMOS guidelines.	> 98%*	–	–		A001311
CBD isolate from conventional hemp cultivation EU This CBD isolate comes from conventional biomass and is produced in the EU. It is intended for use in larger quantities and for price-sensitive customers. This product is designed as a simple standard product and is primarily aimed at customers with price-sensitive requirements. It is suitable for use in larger quantities. Please note our minimum order quantity (MOQ)	> 99%*	–	–	–	A000615

CBG & CBN Isolates

CBG isolate from Swiss organic hemp farming This isolate meets the highest quality and purity standards. The CBG is made from Bio Suisse- and GACP-certified biomass in Switzerland. This GMP quality product is guaranteed to be free of any pesticides, heavy metals, microbiological contaminants, mycotoxins, and residual solvents. It is suitable for use in NATRUE-certified organic cosmetic products.	> 99%	+	Bio Suisse	–	A000730
CBN isolate from European biomass This CBN isolate comes from conventional biomass and is produced in the EU. This product is designed as a simple standard product and is primarily aimed at customers with price-sensitive requirements. Please note our minimum order quantity (MOQ)	> 98%	–	–	–	A000987

Isolate with carrier oil?
No problem

In addition to the pure isolate, we also offer the possibility of mixing it with a desired carrier oil to your individual concentration. You can choose from the following carrier oils:

- » Organic MCT Oil
- » Organic Sunflower Seed Oil
- » Organic Hemp Seed Oil
- » Other Oils on request

*To promote transparency and trust, we provide detailed analyses that include all relevant information about our product: Cannabinoids, pesticides, heavy metals and solvent residues. Further analyses available on request (excluding A000615).

Our Raw Materials

Cannabis Extracts

INCI: CANNABIS SATIVA LEAF EXTRACT
Description & properties: Yellowish to light brown, solid and oily, fat-soluble, odour typical of hemp

Vegan

GMO free

No animal testing

Hemp Extracts And CBD In Cosmetics

Great Effect With Increasing Demand

Cannabinoids are chemical compounds found in cannabis. The best known cannabinoids in the cannabis plant are the phytocannabinoid tetrahydrocannabinol (THC) and cannabidiol (CBD). In addition, there are more than 100 other cannabinoids. Hemp extracts and cannabinoids such as cannabidiol (CBD) are enjoying increasing popularity worldwide as ingredients in cosmetic products due to their diverse effects. The following effects are attributed to hemp extracts and cannabinoids (especially cannabidiol, CBD):

- » Anti-inflammatory
- » Antibacterial
- » Antioxidant
- » Pain relieving
- » Skin protection/nourishing
- » Anti-sebum

We offer a wide range of hemp extracts and cannabinoids as raw materials for cosmetic production.

INCI raw materials approved in cosmetics from the cannabis plant

Cosmetic ingredients have an international name, a so-called INCI term (International Nomenclature for Cosmetic Ingredients). Each ingredient is also listed in the Central European Register of Cosmetic Ingredients, COSING. The following INCI are listed without restriction of use (status: January 2022):

INCI	FUNCTIONS	CAS #
CANNABIS SATIVA SEED OIL	Skin conditioning, skin conditioning - emollient	89958-21-4
CANNABIS SATIVA LEAF EXTRACT	Skin conditioning, skin conditioning - emollient	n/a
CANNABIDIOL - DERIVED FROM EXTRACT OR TINCTURE OR RESIN OF CANNABIS	Anti-sebum, Antioxidant, Skin conditioning, skin protecting	13956-29-1
CANNABIGEROL (since March 2021)	Skin conditioning	25654-31-3
CANNABIDIOL - SYNTHETICALLY PRODUCED	Anti-sebum, antioxidant, skin conditioning, skin protecting	13956-29-1
CANNABIS SATIVA ROOT EXTRACT* (since August 2021)	Antimicrobial, Antioxidant	89958-21-4

THC in cosmetics

For the tetrahydrocannabinol content, THC, there are so far no legally binding guideline values for maximum quantities in cosmetics. Thus, the country-specific THC limit under narcotics law applies (0.2% in most EU countries, 1% in Switzerland).

We Think In Partnerships

We are your Cannabis Experts

We offer individual and customer-specific solutions

We help you to act successfully

We offer local support through local sales staff

We provide support in all legal aspects

International and reliable distribution with import & export

Everything Under One Roof From Farming To Production To Distribution

25 years in organic farming

We've been growing hemp in our fields and greenhouse near Fribourg (Switzerland), using only the purest organic methods, for over 15 years. We harvest by hand and according to the strict Bio Suisse certification guidelines.

Handpicked harvesting

During the annual harvest, the entire team rolls up their sleeves and joins in to ensure that the hemp plants are gently harvested from the fields. The plants are then neatly separated, dried, and prepared for extraction.

Gentle CO₂ & THC extraction

Our extracts and cannabinoids are produced in-house, just a few steps away from our fields. The natural and environmentally friendly CO₂ extraction takes place without heat to avoid the destruction of valuable cannabinoids, terpenes and flavonoids. For the Broad Spectrum, we extract THC using flash chromatography.

Independent quality assurance

Trust and transparency are our top priorities. We analyze each batch in our in-house laboratory while sending a sample to a certified, independent laboratory at the same time. All analyses are also available online.

Everything under one roof

We even do the bottling in-house. This gives us full transparency and control over every production step.

Worldwide distribution

Our end products are exported to our EU warehouse, from where they can be shipped directly to your doorstep – anywhere in the world.

Sustainability & Responsibility

We are a sustainable company. This includes, among other things, operating socially and ecologically and taking personal responsibility for the environment. We produce two tons of CBD extract per year. The entire production is under one roof – from the seeds to the finished CBD product. The entire value chain is in our hands. This means that we travel minimal distances and thus reduce our ecological footprint.

Short Distances Up To 20% Less CO₂

By keeping our sourcing routes short and in the DACH region, we emit 15–20% less CO₂ into the air per kg of extract produced.

Modern CO₂ Extraction 10x Less CO₂ Emission

Extracting natural substances with modern CO₂ extraction produces 10 times less CO₂ than an extraction based on ethanol (or other comparable alcohols based on petrochemical resources).

Outdoor Cultivation 98% Less CO₂ Emissions

A value chain based on outdoor cultivation emits 98% less CO₂ into the air and uses 78% less water than a value chain based on indoor cultivation.
